Market performance overview

- Global equities tumbled in September due to concerns of a global recession forming on the horizon.
- Developed-market equities fared better than emerging markets. Within emerging markets, Latin America fell by less than Pacific ex-Japan.
 - U.S. equities retreated by 9.21% during the month (as represented by the S&P 500 Index).
 - Within U.S. equities, financials and health care companies outperformed other sectors. Meanwhile, information technology and telecommunications companies suffered worse than other sectors.
 - Large-cap stocks outperformed small-cap stocks. Large-cap value stocks outperformed large-cap growth stocks, while small-cap growth stocks outperformed small-cap value stocks.
- U.S. Treasury rates climbed across the yield curve, with shorter-to-intermediate term rates outpacing longer-term rates on the upside.
- The Federal Open Market Committee increased the federal funds rate by 0.75% in September, raising the benchmark rate's target range to 3.0%-3.25%.

Important Information

Performance data does not reflect your individual account performance but reflects assets in the First Community Foundation Partnership of PA Long Term Pool. For account performance please refer to your individual statement. As of the close of business on 9/30/2022, the Total Index Composition is as follows: 32.2% S&P 500 Index, 27.4% MSCI All Country World ex US Index (Net), 15.6% Bloomberg Barclays US Agg Bond Index, 8.2% Russell Small Cap Completeness Index, 5.1% MSCI Emerging + Frontier Mkts Index (Net), 4.1% Hist Blnd: Real Estate Index, 3.2% Hist Blnd: High Yield Bond Index, 3.2% Hist Blnd: Emerging Markets Debt Index, 1.0% SEI GPA V Private Equity Fund Index. Historical index composition is found in the additional disclosures. Since Inception is 3/31/2007.

Prior to 6/30/2012, Net Portfolio Returns deduct a proxy annual fee for all periods to demonstrate the impact that SIMC's investment management fee had on the portfolio performance. However, this is a hypothetical calculation, as it does not reflect the actual fees paid during the period. In addition, net of fee performance does not include any additional fees charged by the foundation.

This presentation is provided by SEI Investments Management Corporation (SIMC), a registered investment adviser and wholly owned subsidiary of SEI Investments Company. The material included herein is based on the views of SIMC. Statements that are not factual in nature, including opinions, projections and estimates, assume certain economic conditions and industry developments and constitute only current opinions that are subject to change without notice. Nothing herein is intended to be a forecast of future events, or a guarantee of future results. This presentation should not be relied upon by the reader as research or investment advice (unless SIMC has otherwise separately entered into a written agreement for the provision of investment advice).

There are risks involved with investing including loss of principal. There is no assurance that the objectives of any strategy or fund will be achieved or will be successful. No investment strategy, including diversification, can protect against market risk or loss. Current and future portfolio holdings are subject to risk. Past performance does not guarantee future results.

Through June 30, 2012, annual performance is calculated based on monthly return streams, geometrically linked. From June 30, 2012 onward, annual performance is based upon daily return streams, geometrically linked as of the specific month end.

Index returns are for illustrative purposes only and do not represent actual fund performance. Index performance returns do not reflect any management fees, transaction costs, or expenses, which would reduce returns. Indexes are unmanaged and one cannot invest directly in an index.

Current and future portfolio holdings are subject to risks. In addition to the normal risks associated with equity investing, international investments may involve risk of capital loss from unfavorable fluctuation in currency values, from difference in generally accepted accounting principles or from economic or political instability in other nations. Narrowly focused investments and smaller companies typically exhibit higher volatility. Emerging markets involve heightened risks related to the same factors as well as increased volatility and lower trading volume. These risks may be magnified further with respect to frontier market countries, which are a subset of emerging market countries with even smaller national economies. Real estate and REIT investments are subject to changes in economic conditions, credit risk and interest rate fluctuations.

Bonds and bond funds will decrease in value as interest rates rise. Investments in high-yield bonds can experience higher volatility and increased credit risk and risk of default or downgrade when compared to other fixed-income instruments. TIPS can provide investors a hedge against inflation as the inflation adjustment feature helps preserve the purchasing power of the investment. Because of this inflation adjustment feature, inflation protected bonds typically have lower yields than conventional fixed rate bonds.

Important Information

Important Information - continued

The Portfolio Return and underlying holdings performance numbers are calculated using Gross Fund Performance, using a true time weighted performance method (prior to 6/30/2012 the Modified Dietz method of calculation was used). Gross Fund Performance reflects the effective performance of the underlying mutual funds that are selected or recommended by SIMC to implement an institutional client's investment strategy. Gross Fund Performance does not reflect the impact of fund level management fees, fund administration or shareholder servicing fees, all of which, if applicable are used to offset the account level investment management fees the client pays to SIMC. Gross Fund Performance does reflect certain operational expenses charged by the funds and the reinvestment of dividends and other earnings. The inclusion of the fund level expenses that the client incurs but that are offset against the client's account level investment management fees would reduce the gross fund performance of the mutual funds. Alternative, Property and Private Assets performance may be reported on a monthly or quarterly lag.
